SYSTEMS AB

Important information about the Ir-sender on the DoubleSense® Model III

It has come to our attention, that some of the DS3 senders are sensitive to vibrations and that this will shorten their durability. Some of our customers has mounted the sensors on thin L-shape profiles, that vibrate easily with a high amplitude. This is not a good way to mount the sensors.

Since we have become aware that some of our customers have a problem with this, we have developed a new more vibrations safe sender. We will replace the old sender with this new type in our DS3-kit. The new sender will be colour coded with a White sleeving for easy recognition.

We will also offer a trade in price for customer that want to replace their old sender. Just send us your old senders, and we will send the same quantity in return for only 100 SEK /sender and shipping cost.

We hope this will help increase the reliability of the DS3 for the future business.

Best regards
